

Restful-Booker API Test Plan

Document Information

1. Executive Summary

This document outlines the comprehensive test plan for the Restful-Booker API, a RESTful web service for managing hotel booking reservations. The API provides endpoints for authentication, creating, reading, updating, and deleting bookings. This test plan covers functional testing, including happy path scenarios, error scenarios, and edge cases.

2. Scope of Testing

In-Scope:

Functional Test Coverage:

Out-of-Scope:

3. Test Objectives

1. Verify all API endpoints function correctly according to specifications

4. Testing Strategy

4.1 Test Approach

4.2 Test Tools & Environment

4.3 Entry Criteria

4.4 Exit Criteria

5. Test Case Organization

5.1 PING Endpoint Test Cases (2 tests)

5.2 AUTH Endpoint Test Cases (7 tests)

5.3 GET Booking IDs Endpoint Test Cases (9 tests)

5.4 GET Booking Endpoint Test Cases (8 tests)

5.5 CREATE Booking Endpoint Test Cases (15 tests)

5.6 UPDATE Booking Endpoint Test Cases (8 tests)

5.7 PATCH Booking Endpoint Test Cases (6 tests)

5.8 DELETE Booking Endpoint Test Cases (10 tests)

6. Test Data Requirements

6.1 Sample Booking Data

6.2 Authentication Credentials

6.3 Test Scenarios Data

7. Test Execution Steps

7.1 Pre-Test Activities

7.2 During Test Execution

7.3 Post-Test Activities

8. Test Metrics & Reporting

8.1 Metrics to Track

8.2 Defect Classification

8.3 Test Summary Report Template

9. Risk Assessment

9.1 Identified Risks

9.2 Assumptions

10. Approval & Sign-off

| Role | Name | Signature | Date |

11. Test Case Reference

All detailed test cases are documented in: ****Restful_Booker_API_Test_Cases.md****

Test cases include:

12. Revision History

| Version | Date | Author | Changes |
